SANTA FE NEW MEXICAN

Researchers, UNM Renew Partnership

ALBUQUERQUE — The Mind Research Network and The University of New Mexico have signed an agreement to improve cooperative research and development of neuroscience technology.

Mind Research Network president John Rasure says the agreement will help in commercializing diagnostic technology on brain disease and mental illness.

Rasure says it will help the Mind Research Network and the university attract research talent.

The agreement also creates a new academic title, the UNM-MRN professor.

That's intended to help the Mind Research Network recruit outstanding neuroscientists who also benefit from the UNM's academic environment.

UNM president David Schmidly says the agreement will give faculty who work with the mind network access to state-of-the-art equipment that will benefit both institutions
